  • have the potential to relate across the dimensions.                          | California The Living Earth: Unit 1: Ecosystem Interactions  
  Unit Page:  
  Digital:  
  Anchor Phenomena: [https://tinyurl.com/yxhsmx4u](https://tinyurl.com/yxhsmx4u) |
|                                               | Unit Pages: The Unit Page provides teachers and students direct access to Anchor Phenomena for the unit, as well as Investigative Phenomena for each concept found within the unit. The Unit pages are available both in print and digital, and include additional support for teachers, in the Teacher Guide, on how to launch the anchor phenomenon with students. The anchor phenomenon provides students with real-world instances of phenomena, which serve as the context for the unit project. Students communicate their initial ideas, related to the unit project, before engaging with the investigative phenomena in each concept. Investigative phenomena are carefully selected to elicit student scientific questions. As students move through the learning progression, students apply three-dimensional thinking to communicate their ideas about both the anchor phenomenon and each investigative phenomenon, with the intent of constructing explanations to their own questions. |

</table>
| SP1. Quality of supports for monitoring 3D learning and EP&Cs integration. | **Teacher Dashboard: Real Time Data & Differentiation**  
Teachers are equipped with a Dashboard on the right-hand side of the screen that shows all student answers from the Technology Enhanced Items (TEIs). These activities are tagged by SEP and CCC designations for both the student. Students are frequently applying the Environmental Principles and Concepts throughout their learning.  
Throughout the learning progression, each tab of each concept includes Technology Enhanced Items that have students connect to what they already know about the topic (Engage), and then as they progress, to monitor what they do learn as they explore and learn through a variety of multimodal resources (Explore, Explain, Elaborate, Evaluate). Students receive feedback on their knowledge, and the teacher has real-time access to this data in the Dashboard. This real-time data allows teachers to remediate, accelerate or reinforce learning as needed, in order to help students develop metacognitive abilities.  
Based on this real-time data, teachers can then make decisions about the needs of each student and select an appropriate instructional resource within the concept to meet the students’ needs. Discovery Education Experience resources deepen the pool of assets that can be assigned to students.  
In addition to the full Dashboard, teachers have a Results View for all individual Technology Enhanced items at point of use as well. | **Student and Teacher Learning Dashboards**

| SP2. Quality of Capturing Student progress Over time. | **Assessment Builder**
Discovery Education’s Assessment Builder offers a unique opportunity to effectively assess individual student performance, both on the part of the teacher and for student self-assessment. The Assessment Builder tool also provides remediation content suggestions for areas in which students may need further work. Class and individual reports serve as a mechanism to measure performance easily in all content areas, provide feedback, and inform educators how to best support individual student growth and improvement. Teachers can utilize pre-created concept and unit assessments or create their own, including standards-based assessments and teacher-created items.

Because the assessment of students is an ongoing process that occurs throughout each lesson, other formative and self-assessment types are embedded throughout digital and print lessons in order to provide benchmarks that show student progress in preparation for the final measure, the summative assessment. Constructed response items, hands-on lab worksheets, and Scientific Explanation sheets include rubrics for scoring, visible to teacher and student. Online responses are compiled and displayed for teachers in a dashboard. Names can be removed from the dashboard and the response order randomized so that responses can be used for class discussion and the selection of student exemplars. The Assessment Dashboards in the California Science Experience allow teachers to track student progress on assessment items, with easy-to-read color coding, also known as traffic light scoring. | |

| SP5. Quality of use of formative and summative assessments | The materials provide self- or peer-assessments that allow students to reflect on and monitor their learning over time. Students can monitor their progress across a course using the student level dashboard. The dashboard includes color-coded, or traffic light scoring, for each technology-enhanced item found within a concept. As students progress through concepts, there are many opportunities that are provided for reflection throughout the Student Edition. Teacher embedded notes throughout also guide students to reflect on their new thinking. Additionally, students can reflect on their growth in the development of scientific explanations constructed during the Explain portion of each lesson. Students will learn to increase the rigor and relevance of the evidence embedded within their explanations. The “your ideas” item found in Engage under the Can You Explain (CYE) question allows students to record initial ideas or responses to the questions. Students can compare their initial responses after constructing their explanations in Explain. Students can review and provide feedback to one another throughout. The Discovery Education Studio creation tool allows students to create portfolios of their work over a course, unit, or concept. Students can collaborate with other students using the Studio tool, as well as share examples of their work with the teacher and their classmates. | Hands-On Activities and Hands-On Labs

### Components

| TS1. Phenomena/ problems Driven Three Dimensional Learning |

---

### Strengths

Teacher materials provide background information about the phenomena or problems included in the learning sequence and across sequences provide:

- an explanation of the role of phenomena or problems in driving student learning.
- rationale for why the unit phenomena or problems were selected for the targeted DCIs, SEPs, CCCs, and EP&Cs (when applicable).

Anchor and Investigative Phenomena were identified for each unit and concept based on their ability to demonstrate the disciplinary core ideas of the required performance expectations of the instructional segment bundles. Writers of the California Science Experience also considered the age appropriateness of topics to select real-world phenomena that would engage students in high school.

### Unit Level Support:

The Unit Pages provide teachers and students direct access to Anchor Phenomena for the unit, as well as Investigative Phenomena for each concept found in the unit. Students are engaged in real-world phenomena using video, imagery, hands-on experiences, and other modalities. Students are encouraged to write their own questions, but phenomena are also paired with guided questions for scaffolding when appropriate. As students move through the learning progression, the Anchor Phenomenon will be linked to concept Investigative Phenomena, which will drive student explorations using the SEPs through the lens of the CCCs.

| TS1. Phenomena/problems Driven Three-Dimensional Learning | **Concept-Level Support:** Each concept begins with a smaller, real-world investigative phenomenon allowing students to dive into the remainder of content across the 5Es, looking for evidence to explain the investigative phenomenon. Teachers are supported through the use of embedded teacher notes and additional strategies found in the print Teacher Edition. For example, the first teacher note found in Engage provides a strategy to utilize with students. A teacher can use the Can You Explain? question as a frame for learning or can encourage students to develop their own questions to explore within the concept. In the California Science Experience teachers receive additional support through teacher notes. Point-of-use teacher notes within each E tab, additional assessments, student misconceptions, background material, and more are visible by turning on the Teacher View toggle. **Teacher Notes:** Teachers notes found in Engage describe how to set up an experience for students to allow the students to generate questions around the Investigative Phenomena. Teacher notes found within Unit Project in Elaborate help the teacher structure small groups or prepare materials needed for design activities. | Model Lesson

| TS2. Coherence. | Teacher materials describe and provide a rationale for the conceptual framework and sequence of ideas, practices, and learning experiences in the learning sequences and for across sequences:  
  • strategies for linking student experiences across lessons to ensure student sense-making and/or problem-solving focused on phenomena or problems is linked to learning across all three dimensions.  
  • connections to other science domains, nature of science, engineering, technology, and applications of science, math, ELA, and EP&Cs (when applicable).  
  California Science Experience provides for coherence by:  
  • limiting the topics covered to the topics identified in NGSS  
  • arranging experiences so that student understanding grows over the course of the unit  
  • connecting concepts over the course of the year and from one year to the next  
  Because the courses in the California Science Experience were designed to address the requirements of NGSS, they include the core ideas, science and engineering practices, and crosscutting concepts that are identified in NGSS for a given grade. California Science Experience addresses no more and no less than the content specified within NGSS while expanding the time and depth devoted to the core concepts. | EP&C’s and 3-Dimensional Learning

### Component

| TS3. Effective Teaching. |

#### Supporting 21st Century Learners:
Through every step of the learning cycle, Discovery Education’s Life Science, Chemistry and Physics Science Techbooks feature diverse and rich multimedia resources: video, images, audio, interactives, virtual labs, online models, animations, rich informational text, and more. Marquee Discovery Education content including *MythBusters*, *Street Science*, and *Outrageous Acts of Science*, blend entertainment with education to motivate students to investigate real-world phenomenon. Virtual labs and online models allow students to quickly manipulate variables to test out their ideas in an online environment. Students may even solve real world problems using NBA, WNBA, MLB or NFL topics with real-time data. Furthermore, the robust digital content within Discovery Experience gives both teachers and students more opportunities to design authentic and meaningful problems.

#### Teacher Notes:
Teacher notes make the connection between the high-quality digital assets and activities and the SEPs and CCCs explicit for teachers through instructional guidance. SEP and CCC indicators are included for activities found in each day of instruction in the Teacher Edition.

**Teacher materials provide an array of strategies:**
- to support student access to the targeted learning goals, experiences, and performances.
- that help teachers differentiate instruction.

California Science Experience allows teachers to differentiate instruction, degrees of readiness, and interests and offers resources to help vary content, process, product, and learning environment through the core instructional pathway.

**Content-Specific Differentiation Strategies:**
Every concept within all of the California Science Experience courses include a robust Model Lesson. Within the Print Teacher Edition and Digital Teacher notes, teachers are provided with differentiation strategies, including scaffolded support for English language learners, struggling students, and advanced students, specific to the concept and that include reference to the use of multimedia assets. These differentiation strategies are provided at point of use.

**Student Interactive Worktext Tools:**
- Text read-aloud features
- Lexile and language options
- Highlighting and note-taking
- Interactive glossary

| SW5. Quality of providing equitable learning opportunities. | **Reading Comprehension**  
Students interact with text, produce text, participate in discussions, and engage in research for the primary purpose of building their reading comprehension skills. Discovery Education’s digital resources were expertly crafted with tools and opportunities to support all types of learners to make meaning of informational text. Multiple forms of representation, including language alternatives; dual reading levels; and the complementary use of images, videos, and audio, build students’ background knowledge and strengthen their comprehension.  
California Science Experience provides a wide array of graphic organizers and visual supports offering non-linguistic opportunities to process content. Hands-on Activities and labs provide support for interacting with science concepts making learning visual. Additional, Hands-on Labs and non-fiction Reading Passages are found in the Explore More Resources tab of each Concept providing related content for building students’ scientific understanding and development. The Reading Passages on a concept are written at different Lexiles. These passages offer different text structures such as problem-solution, cause and effect, and compare and contracts. Students not only learn to read these types of texts but they are also used as mentor texts for writing. |           |

| SW5. Quality of providing equitable learning opportunities. | **Multilingual Support**  
Video, audio, and print text resources are available in a number of languages. Digital search filters help teachers and students identify resources in other languages. In addition, the program is available digitally and in print in both English and authentically translated Spanish to support dual immersion programs.  
**English Language Development**  
California Science Experience provides access to rich content and academic language in science. Throughout the California Science Experience, ELA/ELD Standards and the California NGSS work in tandem to support the English learners. In the California Science Experience students build knowledge about science in variety of different ways. Teachers are provided with point of use suggestions for meeting the needs of English Learner students with various levels of language acquisition including, Emerging, Expanding and Bridging. In addition to the point of use lesson suggestions, tools and supports are embedded within the digital and print components to scaffold and support language and content. |           |

<td>SW5. Quality of providing equitable learning opportunities.</td>
<td>California Science Experience supports the breadth and depth of students’ vocabulary acquisition through multiple representations. Students will see new academic language highlighted in context of the student edition in both the print and digital program. In the digital offering students can click on the word and several additional contextual supports are provided such as; seeing the word in context of a sentence, viewing an image and/or video and a traditional definition. In addition to the California Science Techbook, all students and teachers will have access to the Discovery Education Experience providing access to rich content to extend and deepen students understanding. Through the Discovery Education Experience students have access to more than 200,000 media assets to go as deep and wide as preferred. This includes: • appropriate reading, writing, listening, and/or speaking alternatives for students who are English language learners, have special needs, read below the grade level, or have high interest and have already met the intended learning goals. • culturally relevant contexts and examples that support all students. • opportunities to cultivate interest and confidence as scientists and engineers for all students.</td>
