| F1. Presence of Phenomena / Problems.          | The materials include phenomena/problems:  
   - that have the potential to drive student learning.  
   - have the potential to relate across the dimensions.  
   
   **Unit Pages:** The Unit Page provides teachers and students direct access to Anchor Phenomena for the unit, as well as Investigative Phenomena for each concept found within the unit. The Unit pages are available both in print and digital, and include additional support for teachers, in the Teacher Guide, on how to launch the anchor phenomenon with students. The anchor phenomenon provides students with real-world instances of phenomena, which serve as the context for the unit project. Students communicate their initial ideas, related to the unit project, before engaging with the investigative phenomena in each concept. Investigative phenomena are carefully selected to elicit student scientific questions. As students move through the learning progression, students apply three-dimensional thinking to communicate their ideas about both the anchor phenomenon and each investigative phenomenon, with the intent of constructing explanations to their own questions. | California Chemistry in the Earth System: Unit 5: Chemistry and the Biosphere Unit Page:

California Science Experience fosters a dynamic classroom environment where students interact with printed text, digital resources, and hands-on activities, all which create three-dimensional learning experiences. Each concept in the California Science Experience purposefully layers each dimension of the NGSS, so students can authentically demonstrate the SEPs and CCCs. Within each course, students learn about and apply three-dimensional learning in a variety of ways. |
### Criteria

| SP1. Quality of supports for monitoring 3D learning and EP&Cs integration. |

### Strengths

**Teacher Dashboard: Real Time Data & Differentiation**

Teachers are equipped with a Dashboard on the right-hand side of the screen that shows all student answers from the Technology Enhanced Items (TEIs). These activities are tagged by SEP and CCC designations for both the student. Students are frequently applying the Environmental Principles and Concepts throughout their learning.

Throughout the learning progression, each tab of each concept includes Technology Enhanced Items that have students connect to what they already know about the topic (Engage), and then as they progress, to monitor what they do learn as they explore and learn through a variety of multimodal resources (Explore, Explain, Elaborate, Evaluate). Students receive feedback on their knowledge, and the teacher has real-time access to this data in the Dashboard. This real-time data allows teachers to remediate, accelerate or reinforce learning as needed, in order to help students develop metacognitive abilities.

Based on this real-time data, teachers can then make decisions about the needs of each student and select an appropriate instructional resource within the concept to meet the students’ needs. Discovery Education Experience resources deepen the pool of assets that can be assigned to students.

| SP5. Quality of use of formative and summative assessments.             | The materials provide self- or peer-assessments that allow students to reflect on and monitor their learning over time. Students can monitor their progress across a course using the student level dashboard. The dashboard includes color-coded, or traffic light scoring, for each technology-enhanced item found within a concept. As students progress through concepts, there are many opportunities that are provided for reflection throughout the Student Edition. Teacher embedded notes throughout also guide students to reflect on their new thinking. Additionally, students can reflect on their growth in the development of scientific explanations constructed during the Explain portion of each lesson. Students will learn to increase the rigor and relevance of the evidence embedded within their explanations. The “your ideas” item found in Engage under the Can You Explain (CYE) question allows students to record initial ideas or responses to the questions. Students can compare their initial responses after constructing their explanations in Explain. Students can review and provide feedback to one another throughout. The Discovery Education Studio creation tool allows students to create portfolios of their work over a course, unit, or concept. Students can collaborate with other students using the Studio tool, as well as share examples of their work with the teacher and their classmates. | Hands-On Activities and Hands-On Labs

| TS1. Phenomena/problems Driven Three-Dimensional Learning. | Teacher materials provide background information about the phenomena or problems included in the learning sequence and across sequences provide:  
  - an explanation of the role of phenomena or problems in driving student learning.  
  - rationale for why the unit phenomena or problems were selected for the targeted DCIs, SEPs, CCCs, and EP&Cs (when applicable).  
  Anchor and Investigative Phenomena were identified for each unit and concept based on their ability to demonstrate the disciplinary core ideas of the required performance expectations of the instructional segment bundles. Writers of the California Science Experience also considered the age appropriateness of topics to select real-world phenomena that would engage students in high school.  
  **Unit Level Support:**  
  The Unit Pages provide teachers and students direct access to Anchor Phenomena for the unit, as well as Investigative Phenomena for each concept found in the unit. Students are engaged in real-world phenomena using video, imagery, hands-on experiences, and other modalities. Students are encouraged to write their own questions, but phenomena are also paired with guided questions for scaffolding when appropriate. As students move through the learning progression, the Anchor Phenomenon will be linked to concept Investigative | Three Dimensions at a Glance

<td>TS1. Phenomena/problems Driven Three-Dimensional Learning.</td>
<td>Phenomena, which will drive student explorations using the SEPs through the lens of the CCCs. <strong>Concept-Level Support:</strong> Each concept begins with a smaller, real-world investigative phenomenon allowing students to dive into the remainder of content across the 5Es, looking for evidence to explain the investigative phenomenon. Teachers are supported through the use of embedded teacher notes and additional strategies found in the print Teacher Edition. For example, the first teacher note found in Engage provides a strategy to utilize with students. A teacher can use the Can You Explain? question as a frame for learning or can encourage students to develop their own questions to explore within the concept. In the California Science Experience teachers receive additional support through teacher notes. Point-of-use teacher notes within each E tab, additional assessments, student misconceptions, background material, and more are visible by turning on the Teacher View toggle. <strong>Teacher Notes:</strong> Teachers notes found in Engage describe how to set up an experience for students to allow the students to generate questions around the Investigative Phenomena. Teacher notes found within Unit Project in Elaborate help the teacher structure small groups or prepare materials needed for design activities.</td>

| TS2. Coherence    | Teacher materials describe and provide a rationale for the conceptual framework and sequence of ideas, practices, and learning experiences in the learning sequences and for across sequences:  
- strategies for linking student experiences across lessons to ensure student sense-making and/or problem-solving focused on phenomena or problems is linked to learning across all three dimensions.  
- connections to other science domains, nature of science, engineering, technology, and applications of science, math, ELA, and EP&Cs (when applicable).  
California Science Experience provides for coherence by:  
- limiting the topics covered to the topics identified in NGSS  
- arranging experiences so that student understanding grows over the course of the unit.  
- connecting concepts over the course of the year and from one year to the next.  
Because the courses in the California Science Experience were designed to address the requirements of NGSS, they include the core ideas, science and engineering practices, and crosscutting concepts that are identified in NGSS for a given grade. California Science Experience addresses no more and no less than the content specified within NGSS while expanding the time and depth devoted to the core concepts. | EP&C’s and 3-Dimensional Learning

| TS3. Effective Teaching     | **Teacher materials support the use of and provide a rationale and evidence of effectiveness for strategies that:**  
  - support students in learning through authentic and meaningful phenomena or design problems.  
  - support student learning across the three dimensions.  
  - make student thinking visible; promote reasoning, sense-making, and problem-solving; challenge student thinking; and develop metacognitive abilities
  
  California Science Experience digital and print was designed and developed to meet the needs of students and to allow for flexibility for teachers to use in a variety of classroom settings.  

**Supporting 21st Century Learners:**  
Through every step of the learning cycle, Discovery Education’s Life Science, Chemistry and Physics Science Techbooks feature diverse and rich multimedia resources: video, images, audio, interactives, virtual labs, online models, animations, rich informational text, and more. Marquee Discovery Education content, including MythBusters, Street Science, and Outrageous Acts of Science, blend entertainment with education to motivate students to investigate real-world phenomenon. Virtual labs and online models allow students to quickly manipulate variables to test out their ideas in an online environment. Students may even solve real world problems using NBA, WNBA, MLB or NFL topics with real-time data. Furthermore, the robust                                                                                          | Model Lesson

**Assigning Features:**
Teachers can tailor instruction and meet the needs of all students by assigning appropriate content based on specific learning preferences or developmental needs. In the California Science Experience teachers can quickly assign and share instructional resources to individual students, groups of students, or the entire class.

**Professional Learning:**
Teacher professional learning is bundled in the California Science Experience program. The face-to-face and job-embedded professional learning sessions focus on getting started with and using the resources to meet the needs of all students through effective, differentiated instruction.

### Components

| TS5. Support to Monitor Student Progress |

### Strengths

**Teacher materials provide background information about the phenomena or problems included in the learning sequence and across sequences provide:**

- an explanation of the role of phenomena or problems in driving student learning.
- rationale for why the unit phenomena or problems were selected for the targeted DCIs, SEPs, CCCs, and EP&Cs (when applicable).

Throughout the learning progression, each tab of each concept includes Technology Enhanced Items that have students connect to what they already know about the topic (Engage), and then as they progress, to monitor what they do learn as they explore and learn through a variety of multimodal resources (Explore, Explain, Elaborate, Evaluate). Students receive feedback on their knowledge, and the teacher has real-time access to this data in the Dashboard. This real-time data allows teachers to remediate and differentiate as needed in order to help students develop metacognitive abilities.

Based on this real-time data, teachers can then make decisions about the needs of each student and select an appropriate instructional resource within the concept to meet the students’ needs. Discovery Education Experience resources deepen the pool of assets that can be assigned to students.

| SW3. Quality of leveraging student prior knowledge and experiences. | Materials leverage students’ prior knowledge and experiences to motivate student learning in ways that:  
- make visible students’ prior knowledge and experiences related to the anchoring and investigative phenomena/problems and relevant SEPs, DCIs, and CCCs and EP&Cs (when applicable).  
- revisit students’ early ideas to see how they have changed (or not) as they figure out phenomena/solve problems.  
- make explicit links to new ideas and practices being developed by students. | California Chemistry in the Earth System: Unit 4: Chemical Reactions  
- Print:  
  - Can You Explain: Oxidation-Reductions Reactions: p. 280  
  - Digital: dlc.com/ca9082s  
- Digital:  
  - Explore More Resources: Resource Library for Exploration: https://tinyurl.com/y2vhzvbn |

The Engage section of each concept includes Technology Enhanced Items that have students identify what they already know about the topic. They receive feedback on their current knowledge, and the teacher has real-time access to this data in the Dashboard. Each concept also includes initial thoughts and ideas that might support the guiding question; this will appear at the bottom of the Engage page in the digital Techbook where it says “Can You Explain?”

Students use resources such as hands-on activities, images, songs, interactives, glossary animations, reading passages, and the Core Interactive Text to answer “Can You Explain” questions. They will keep track of their evidence using both print and digital supports in crafting their scientific explanations in each concept and can revisit their answer in their personal dashboard.

| SW4. Quality of providing experiences that develop metacognition. | **Materials include learning experiences for students to:**  
  • Set and monitor their learning in light of the targeted learning goals  
  • Consider, overtime, what and how they have learned across the three dimensions  
  • Articulate how the three dimensions helped them figure out anchor and investigative phenomena/solve problems | Notes, Highlighting and Student Dashboard     |

**Monitoring Student Progress & Metacognition**  
Teachers are equipped with a Dashboard on the right-hand side of the screen that shows all student answers to responses from the Technology Enhanced Items (TEIs) embedded in the Student Interactive Worktext. Throughout the learning progression, each tab of each concept includes Technology Enhanced Items that have students connect to what they already know about the topic (Engage), and then as they progress, to monitor what they do learn as they explore and learn through a variety of multimodal resources (Explore, Explain, Elaborate, Evaluate). They receive feedback on their knowledge, and the teacher has real-time access to this data in the Dashboard. This real-time data allows teachers to remediate and differentiate as needed in order to help students develop metacognitive abilities.

<td>SW4. Quality of providing experiences that develop metacognition.</td>
<td>Each Concept includes initial thoughts and ideas that might support the guiding question; this will appear at the bottom of the Engage page in the digital program, “Can You Explain?”. Students are encouraged to think about what they know, how they know it and what they would like to learn more about. They do this by applying their learning across the three dimensions and revisit this learning at the end of the Concept. Their new learning is then linked to confirming or modifying their initial understanding of Anchor Phenomena from the Unit launch. Students use resources such as hands-on activities, images, songs, interactives, glossary animations, reading passages, and the Core Interactive Text to answer “Can You Explain” questions. They will keep track of their evidence using both print and digital supports in crafting their scientific explanations in each concept and can revisit their answer in their personal dashboard. Tools for All Types of Learners: Students are able to annotate text using highlighting and notes. These annotations remain at point of use for students and are automatically populated in a Notebook that students can use for reflections and for reviewing their learning. Studio is an excellent tool that also provides an opportunity for students to demonstrate learning and revisit as they move through learning progression.</td>

| SW5. Quality of providing equitable learning opportunities. | Materials ensure that all students, including those from nondominant groups and with diverse learning needs, have access to the targeted learning goals and experiences, including:  
- appropriate reading, writing, listening, and/or speaking alternatives for students who are English language learners, have special needs, read below the grade level, or have high interest and have already met the intended learning goals.  
- culturally relevant contexts and examples that support all students.  
- opportunities to cultivate interest and confidence as scientists and engineers for all students. | Questioning Like a Scientist Example |

California Science Experience offers access to best-in-class content that meets instructional goals, inspires student engagement, and reflects the diversity of the students served. With the California Science Experience all students have full access to a robust science curriculum.

**Reading Comprehension**  
Students interact with text, produce text, participate in discussions, and engage in research for the primary purpose of building their reading comprehension skills. Discovery Education’s digital resources were expertly crafted with tools and opportunities to support all types of learners to make meaning of informational text. Multiple forms of representation, including language alternatives; dual reading levels; and the complementary use of images, videos, and audio, build students’ background knowledge and strengthen their comprehension.

<td>SW5. Quality of providing equitable learning opportunities.</td>
<td>California Science Experience provides a wide array of graphic organizers and visual supports offering non-linguistic opportunities to process content. Hands-on Activities and labs provide support for interacting with science concepts making learning visual. Additional, Hands-on Labs and non-fiction Reading Passages are found in Explore More Resources in the Explore tab of each Concept providing related content for building students’ scientific understanding and development. The Reading Passages on a concept are written at different Lexiles. These passages offer different text structures such as problem-solution, cause and effect, and compare and contracts. Students not only learn to read these types of texts but they are also used as mentor texts for writing. <strong>Multilingual Support</strong> Video, audio, and print text resources are available in a number of languages. Digital search filters help teachers and students identify resources in other languages. In addition, the program is available digitally and in print in both English and authentically translated Spanish to support dual immersion programs. <strong>English Language Development</strong> California Science Experience provides access, to rich content and academic language in science. Throughout the California Science Experience ELA/ELD Standards and the California NGSS work in tandem to support the English learners. In the California Science Experience, students build knowledge about science in variety of different ways, teachers are provided with</td>

<td>point of use suggestions for meeting the needs of English Learner students with various levels of language acquisition including, Emerging, Expanding and Bridging. In addition, to the point of use lesson suggestions, tools and supports are embedded within the digital and print components to scaffold and support language and content. California Science Experience supports the breadth and depth of students’ vocabulary acquisition through multiple representations. Students will see new academic language highlighted in context of the student edition in both the print and digital program. In the digital offering students can click on the word and several additional contextual supports are provided such as; seeing the word in context of a sentence, viewing an image and/or video and a traditional definition. In addition to The California Science Techbook, all students and teachers will have access to the Discovery Education Experience providing access to rich content to extend and deepen students understanding.</td>
